

PRINCESS ANNE HOSPITAL WOODLANDS WARD

- LST Projects has successfully delivered the first phase of a major refurbishment at Princess Anne Hospital, enhancing facilities at one of the UK's largest neonatal units
- The project included the creation of two wards with eight cots and pull-down parent beds, a special care room with five cots, and three hotel-style parent and baby rooms
- Additional facilities include a parent relaxation area with food preparation space, a quiet room, private expressing area, and new staff accommodation for doctors and care teams
- Key infrastructure upgrades featured the installation of large air-handling units (AHUs) to ensure clean air circulation and medical spines equipped with lifesaving equipment backed by UPS batteries to ensure uninterrupted care
- This refurbishment is one of the first in healthcare to meet the requirements of the new Building Safety Regulator, successfully passing Gateway 3

"LST is a local organisation with whom we've done quite a lot of work across here and at the general. And what I'd say is pretty consistently, well very consistently that the standard, the quality of their work is really strong, this looks sharp doesn't it, it looks as it was intended to look and that is what LST have delivered, so a big thank you to LST."

David French, Chief executive officer
