

ROYAL HOLLOWAY UNIVERSITY ENTRANCES REFRESH PROJECT

■ We successfully delivered the refurbishment of six building entrances and eight lecture theatres across the Royal Holloway, University of London campus, transforming existing spaces into modern, welcoming and functional environments.

■ The works focused on improving accessibility, enhancing the student and staff experience, and modernising teaching facilities to create high-quality spaces that support the University's ongoing educational requirements.

■ The project involved the refurbishment and modernisation of six building entrances, creating more welcoming and inviting environments for students, staff and visitors. Alongside these improvements, eight lecture theatres were upgraded to provide contemporary teaching and learning spaces, enhancing functionality, comfort and the overall user experience.

■ The completed refurbishments have significantly enhanced the appearance and functionality of the University's facilities, providing modern lecture theatres and more welcoming building entrances.

Through effective programming, proactive communication and careful site management, LST Projects successfully delivered the improvements whilst minimising disruption to the University's students, staff and wider campus community.
