Mar 2025 - Mar 2026

£2.4m

- LST Projects delivered a new extension at Warden Park School, providing 275m² of additional floor space to support students with Special Educational Needs and Disabilities
- The building includes dedicated SEND facilities, with new classrooms, sensory rooms and supporting spaces, along with a connection to the existing school to improve access and day-to-day use. The project increases the school's SEND provision to 32 spaces, giving the school greater capacity and more suitable facilities to support its students
- For students, the new building provides a more appropriate environment that supports learning and daily routines, while staff benefit from purpose-built spaces that improve how support can be delivered
- The building incorporates new heating and ventilation systems alongside photovoltaic panels, supporting a more efficient and comfortable environment. Works were delivered within a live school environment, with careful coordination around the examination timetable to minimise disruption
- The completed building provides a clear improvement on the existing facilities, supporting both the school and its students now and in the future

From the very beginning, LST were really considerate about how this was going to work in a working school environment. The way they've managed the subcontractors and the various moving parts has been exemplary. I don't think there's anything they could have done to make this project go any better than it already has.
